RE: Concrete Testing RFP
Landis Avenue Traffic Signals, Phase 1
Myrtle Street to Sixth Street
City Eng. File No.: 15-021

The City of Vineland is requesting quotations to perform concrete testing in relation to the Landis Avenue Traffic Signals, Phase 1 project. This is a federally funded resurfacing project. The concrete is non-structural and is to be used to construct sidewalks and curb as well as foundations for Electrical Items. The city engineering department will require six (6) 4"x8" cylinders per test (3 for 7 day strength & 3 for 28 day strength).

Per NJDOT, testing will be required to be performed on every truckload delivered to the site. Concrete testing will be in accordance with NJDOT Standard Specifications for Road and Bridge Construction 2007. Testing will include strength, slump and air entrainment.

The quantity take-off from the project shows a total amount of concrete to be about 240 CY. It is expected that there will be about 25 trucks total delivering concrete for the project. The contractor is expected to bring 1 concrete truck to the site 2-3 days per week.

The construction contractor for the project will be responsible to provide curing boxes that conform to the 2007 Standard Specifications.

Please provide this office with a quotation with a schedule of values to perform concrete testing for the entire project in accordance with NJDOT regulations. A full set of half size plans has been included.

If you have any questions/comments, please feel free to contact the City of Vineland Engineer's office.
