Summary of Project

Danfoss Pump Procurement

Prepared by Steve August, Principle Engineer x 4241

The purpose of this specification is to provide a contract for the procurement of Danfoss demineralized water pumps. They play a crucial role in temperature control, NOx emissions reduction, and maximizing MW output. The pump set at the HMD Unit #11 generating station is rapidly approaching the end of its service life. The Utility does not currently possess a full set of spare Danfoss pumps. These pumps are specialized in nature and patented by Danfoss. It is crucial that a spare set of pumps is procured at this time in order to insure uninterrupted unit operation. If there are any questions/concerns feel free to contact me.
